

Sheet #3

- I. Create a movie that contains a layer with a background image. Then create a layer containing an object (shape or text), that will act as a mask. Have the object move in some direction over the background. (Save as fmovie13a)
- II. This movie will make use of a guide layer. First using the drawing tools, create a small car (cartoon style is fine), and convert it to a symbol. Now place the car at the top left corner of the stage (Use a KF). Add a 2nd keyframe (about frame 25), and move the car to the top right corner of the stage. Now add a GUIDE layer. Use the pencil (or Pen) tool and draw a line that will simulate a roller coaster going from left to right. Go back to the car layer and place both cars on the path, then create a motion tween. The car should follow the path. Add in other objects and sounds to enhance the movie. (save as fmovie13b)
