PhotoShop Assignment #2

Name: \_\_\_\_\_

Colourization (Level Evaluation)

Choose a car from the Assignment #3 Folder

You must take this gray scale image and colour it. Selections must be done for each part of the image (quick mask is recommended). These selections must be saved. Use these selections to colour the image. A new (named) layer must be used for each part. Blending modes, filters and effects must be applied to achieve a realistic effect. Add your name somewhere on the image. You should have a minimum of 5 saved selections and a minimum of 6 named layers.

I will be looking at the following: Saved Selections, named layers, proper use of blending modes, filters and effects, your name and the overall quality and realism.
